Outlook 2023 DRPS at € 1.65 – 1.75 re-confirmed

DRPS Growth 2023 – 2027: Higher indexation, but also higher financing costs

Expected average annual DRPS Growth 2023 – 2027

- The 2023 – 2027 growth comes from multiple drivers
 - Leasing contracts indexed annually with inflation, we use 4.5% in our forecasts
 - Additional rental income mainly driven by the expectation that completed Full Service Centers are expected to generate higher rental growth than traditional shopping centers
 - Cost reduction program will continue in 2023 and 2024
- The potential loss of the FBI status might have a negative impact on the 2025 DRPS
- Until 2027 we have a total debt expiry of over € 500m and we expect significant increase in interest rates
- Potential income from new business models, which were not allowed under FBI status, not included (e.g. managing for third parties)
- Potential additional growth drivers like acquisitions, potential extensions and residential developments are not yet included

Illustrative example

Rationale

- Adjusted ERVs: New uses generate lower rents
- Discount rate goes down due to sustainable and lower-risk ERV
- Long-term rental growth goes up from 0.00% to 1.00% due to:
 - Restored retail balance
 - Increased scarcity of retail space
 - Increased footfall, dwell time and / or basket size by adding new uses and better balancing the customer needs

Partial conversion to residential can unlock additional value

Delay and expected decrease in residential profits due to current macro environment

Development of residential units

Units

Residential profit reduced to € 0.50-0.80/share

The macro environment has, for now, delayed the expected residential profits and decreased the overall residential opportunity in our Benelux portfolio.

We are now working on the residential opportunity on 8 locations in several stages of the development.

Deal signed with Amvest for 156 units in Kronenburg.

* Notional value of interest bearing debt

** Debt maturity incl. undrawn facilities is 3.4 years at 30 September 2023 (YE 2022: 3.7 years)

- Debt, and consequently LTV, increased following FSC capital expenditure and dividend payments
- Average cost of debt increased by 90 basis points during 2023 as result of the steep rise of short-term benchmark rates, in combination with increased drawings on the revolving credit facilities, of which the interest rate is variable and EURIBOR-based. USPP debt with an average rate of 3%, that matured in July 2023, was partly refinanced with new USPP, at current market rates
- During 2023, the 3-months EURIBOR rate increased by 180 basis points to 3.95% on 30 September 2023. This impacts the floating rate portion of the debt portfolio, currently being 24%
- Following the recently agreed US Private Placements, Wereldhave continues to see traction for additional transactions, that may be closed in Q4 2023 and settled in Q1 2024, which would enhance Wereldhave's credit profile
- Discussions with Belgian banks for refinancing and extension of facilities are progressing
